

Generic Order Export (BROK_GENEXPORT): The program I want to import the data into requires that I have some text at the end of the exported file for each order (i.e. after the products). How can I do that?

Q (2004/02/23): The program I want to import the data into requires that I have some text at the end of the exported file for each order (i.e. after the products). How can I do that?

A: In the latest version of the module there are two ways to go about it.

You can use the token %products% in the "Order area" and that token will be replaced with the contents of the "Products". So instead of listing the products AFTER the contents of the "Order area", the products would be listed where the %products% token is located.

You can place the text that you want to export into the "Order Footer area". This text is exported AFTER all other text areas and is the last thing exported for each order.
