

Category Page Templates (BROK_CTGYTEMPLATES): Using Tokens To Conditionally Display Alternate Images

Are there tokens to conditionally display an alternate image if the product has no image or if the image is missing? (2003/05/30)

Yes, conditional tokens have been added:

`%begin_hasimage%...%end_hasimage%` displays contents if product image file exists

`%begin_hasnoimage%...%end_hasnoimage%` displays contents if product image file does not exist

`%begin_hasthumbnail%...%end_hasthumbnail%` displays contents if product thumbnail file exists

`%begin_hasnothumbnail%...%end_hasnothumbnail%` displays contents if product thumbnail file does not exist

`%begin_nopricediscount%...%end_nopricediscount%` displays contents if the list price is NOT lower than product price

`%begin_nocostdiscount%...%end_nocostdiscount%` displays contents if the price is NOT lower than the cost

which you can use for this. For example, to display a generic image in the place of missing images you would replace the `%prodimage%` token with:

`%begin_hasimage%`

`%prodimage%`

`%end_hasimage%`

`%begin_hasnoimage%`

`%end_hasnoimage%`
