

General Module Issues: How do I check for a module upgrade?

You're either curious or been asleep at the wheel of your store for too long: How do you know if a new version of a module has been released? Perhaps there are new features, bug fixes, or a new version of Miva Merchant has been released and you want to check for upgrades.

At the top of the admin interface for most of our modules there is a 'check for upgrade' link. Click the link. If an upgrade is available you will be given a download link and a revision history. In older modules the link may be "Ver x.xx".

When contacting our customer support we require that you be running the latest version of the module.
