

General Module Issues: How do I install a module?

If you are new to installing modules you might want to read this overview from Miva Corp:

<http://www.miva.com/docs/merchant/howto41/MM1045.pdf>

Typically installing a module is just a matter of 1) installing it in your mall (modules > add module), and 2) enabling it in your store. Import/Export modules don't require the second step.

Some modules may require additional steps, so be sure to follow the installation instructions that came with your module.
